Touch Table Interactive Digital Content

ZDS also provides professional content creation services. Our experienced developers can work with you to create design-conscious and forward-thinking UI's for your Transparent Touchscreen. Whatever your content needs may be, our development team is ready to work with you to share ideas and bring your kiosk to life.

Touch Table Composition

■ Touch Table Kiosks work as a great method for sharing information interactively with other collaborators. You can write, play movies, toss around images, zoom in and out of media to reveal even more media, or have the capability of doing anything a powerful touch screen can do that isn't limited by your imagination. These kiosks are fully customizable and can be programmed to utilize any type of additional hardware such as credit card swipers, bar code scanners, or webcams. The standard Touch Table Kiosk model comes in a U shape and in any color.

Recommended Applications

The Touch Table Kiosk works best in a collaborative environment where people are looking to simultaneously share information through digital media. You can expand, rotate, tap to play, or toss media files around. With ZDS, there is no limit as to what your kiosk can be capable of doing.

Kiosk Specifications:
