

Transparent Touchscreen

Key Features:

- 22" and 46" size availability in a fully customizable casing
- All-in-one system including a built-in PC
- Play and create media and interactive content
- Transparent backlit LCD with IR Touchscreen Overlay

Transparent Touchscreen Interactive Digital Content

ZDS also provides professional content creation services. Our experienced developers can work with you to create design-conscious and forward-thinking UI's for your Transparent Touchscreen.

Transparent Touchscreen Video Walls

Need a bigger Transparent Touchscreen? Fortunately, Transparent Touchscreens can be combined together to create a single display in the same, easy to configure manner that ZDS uses to create Video Walls out of our LCD display panels!

When disassembled, Transparent Touchscreen Kiosks only have a bezel size of 10mm—allowing for a solid Transparent Touchscreen Video Wall display and producing a truly eye-catching setup.

■ Transparent Touch Kiosks are displays that allow you to see through to the other side and are thus ideal for capturing attention. The most popular application for a Transparent Touch Kiosk is as a product display, as the product will benefit from the overlay of displayed, interactive information. Transparent Touch Kiosks are especially impressive when integrated into a public display, studio broadcasting stage, or retail environment.

Specifications:
